**Keywords:** tall fescue, variety, lawn, *Festuca Arundinacea Schreber*,

**SUMMARY**

Jucu 5 tall fescue variety created at USAMV Cluj Napoca is the first romanian variety of tall fescue lawn. It is suitable for overgrowing with grass of the sports ground or with a grass mixture in the landscape architecture. In agriculture can be used in establishing long-term pastures sown in pure culture or mixed with perennial leguminous grassland or for overgrowing with grass of slopes in land reclamation works. Jucu 5 synthetic variety is a kind of early, rich foliage, small width of leaves and average leaf green.

Presents good environmental plasticity, long-term perennity (7 - 10 years), resistance to biotic and abiotic stress, good resistance to diseases, pests, drought and high resistance to wintering and ironing.

Field of application: Landscape architecture, Agriculture.
